

Accelerating gene therapy
projects from DNA design
to commercial scale

We are a science-driven CDMO offering unique expertise in viral vector design and manufacturing, with leading and internationally renowned experts.

Optimized vector design, best-in class manufacturing and advanced vector analytics increase the success of your project

Viral vector manufacturing and analytical testing

- Customized upstream and downstream process development
- Optimization of outcomes, including yield, empty-to-full-ratio, contaminants level and scalability of process
- Preclinical viral vector manufacturing from 0.5L to 50L scale
- cGMP scale production up to 1000L
- Stand-alone analytical development and testing fully internalized

Consulting and scientific advice

- Design of viral vector ensuring optimized manufacturability
- Analysis of sequences and product intellectual property
- CMC development and manufacturing strategies
- Regulatory support for CMC strategy
