

Elevate your AAV purity with our DINAPEAK®'s intensification offering

A scalable polishing solution reducing residual empty capsids to ~10%

After Affinity Capture ~80% Empty

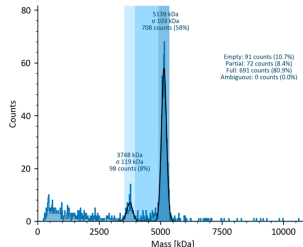

AEX Standard ~30% Empty

Speed

AEX with intensification ~10% Empty

Quality

Advantages of intensification

- 01** | Residual empty capsids reduced to ~10%
- 02** | Continuous chromatography concept
- 03** | Scalable from PD to manufacturing
- 04** | Cost effective

For programs with demanding product quality requirements, AEX intensification delivers substantial empty capsid reduction and a robust path from development to manufacturing.
